

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in this application.

Listing of Claims:

1. (Currently amended) A dispenser for a tissue package, said dispenser comprising
a tissue dispensing aperture and a manipulating opening, both opening into a tissue-containing space of the package;
said tissue dispensing aperture is sized for dispensing one tissue at a time while separating a
duty tissue from a successive tissue;
a flap hinged to the dispenser by a film hinge arrangement wherein said manipulating
opening is normally closed by [[a]] said flap and is openable to allow introduction of a user's fingers
into the tissue-containing space, and wherein said tissue dispensing aperture and the manipulating
opening are coverable; and
a frame surrounding said flap,
wherein said hinge arrangement comprises a pair of spaced hinges;
wherein said spaced hinges have their axes substantially aligned coaxially;
wherein said tissue dispensing aperture is defined by a first edge movable with said flap, and
a second edge which is fixed to the frame; and
wherein the first edge comprises an outer edge formed on said flap, and the second edge
comprises an inner edge defined by a tab comprised on said frame and located between said spaced
hinges.

2. (Withdrawn) A dispenser according to claim 1, wherein said flap is deformably openable.
3. (Currently amended) A dispenser according to claim 1, further comprised of a reclosable lid configured to cover wherein the tissue dispensing aperture and the manipulating opening are coverable, by a re-closable lid.
4. (Original) A dispenser according to claim 3, wherein the tissue dispensing aperture is spaced apart from the lid, so as to accommodate a portion of a duty tissue.
5. (Withdrawn) A dispenser according to claim 1, wherein the tissue dispensing aperture is formed on the flap of the manipulating opening.
6. (Original) A dispenser according to claim 1, wherein the flap is rigid and is hinged to a portion of the dispenser.
7. (Withdrawn) A dispenser according to claim 1, wherein the tissue dispensing aperture is formed on the manipulating opening.
8. (Original) A dispenser according to claim 1, wherein the flap is hinged to the dispenser by an integral hinge.
9. (Original) A dispenser according to claim 1, wherein the flap is rigid though pliable.

10. (Original) A dispenser according to claim 1, wherein ~~[[the]]~~ said flap is further comprised of
~~fitted with~~ a pulling tab.
11. (Withdrawn) A dispenser according to claim 1, wherein the flap is fitted with a pulling
recess.
12. (Withdrawn) A dispenser according to claim 11, wherein the tissue dispensing aperture
constitutes the pulling recess.
13. (Original) A dispenser according to claim 1, attached to a surface of a disposable tissue
package.
14. (Currently amended) A dispenser according to claim 3, ~~wherein the lid is~~ further comprised
of a depressible locking member wherein said lid is arrested in a closed state thereof by [[a]] said
depressible ~~locking member~~, and whereby depressing the depressible locking member ~~results~~
disengages the lid to spring into an open position and remain in this position.
15. (Original) A dispenser according to claim 1, wherein the tissue dispensing aperture is fitted
with friction arrangements to enhance engagement with a tissue projecting there through.
16. (Withdrawn) A dispenser according to claim 15, wherein the friction arrangements are in the

form of projections into a path of the aperture.

17. (Withdrawn) A dispenser according to claim 15, wherein the friction arrangements are in the form of undulants of a path of the aperture.

18. (Original) A dispenser according to claim 3, wherein the lid sealingly covers the tissue dispensing aperture and the manipulating opening.

19. Cancelled.

20. (Currently amended) A dispenser according to claim 1, ~~wherein~~ further comprised of integral hinge portions extending at sides of said tissue dispensing aperture and hinging the manipulating opening is hinged by integral hinge portions extending at sides of the tissue dispensing aperture.

21. (Withdrawn) A dispenser according to claim 1, wherein the manipulating opening is closed by two flaps extending towards one another.

22. (Withdrawn) A dispenser according to claim 1, wherein one of the flap and an edge of the manipulating opening are formed with an engaging member to prevent unintended deformation of the flap upon pulling a tissue through the tissue dispensing aperture.

23. (Withdrawn) A dispenser according to claim 1, wherein the tissue dispensing aperture has a

Y-like shape.

24. (Currently amended) A dispenser according to claim [[1]] 45, wherein a film hinge arrangement hinges the flap ~~is hinged to the dispenser by a film hinge arrangement.~~

25. – 29. Cancelled.

30. (Currently amended) A dispenser according to claim [[29]] 1, wherein said tab is rigidly connected to said frame.

31. (Currently amended) A dispenser according to claim [[28]] 1 wherein said inner edge and outer edge are configured to provide a relatively narrow opening for said aperture when said flap is in a closed position with respect to said frame.

32. (Currently amended) A dispenser according to claim 31 wherein [[said]] a tab and outer edge are configured to provide a relatively large opening for said aperture when said flap is in a open position with respect to said frame.

33. (Original) A dispenser according to claim 32, wherein said inner edge and said outer edge are arcuate and substantially concentric when the flap is in the closed position.

34. Cancelled.

35. (Original) A dispenser according to claim 32, wherein said dispenser is integrally formed with a tissue box cover.

36. (Original) A dispenser according to claim 32, further comprising a locking arrangement for reversibly locking said flap with respect to said frame.

37. (Original) A dispenser according to claim 36, wherein said locking arrangement comprises a snap member comprised on said flap and cooperating with an underside of said frame in registry therewith.

38. (Original) A tissue package fitted with a dispenser according to claim 1.

39. (Original) A tissue package cover fitted with a dispenser according to claim 1.

40. (Currently amended) A rigid cover engagable with a tissue box, said cover fitted with a dispenser comprising

a tissue dispensing aperture and a manipulating opening, both opening into a tissue-containing space of the box;

said tissue dispensing aperture is sized for dispensing one tissue at a time while separating a duty tissue from a successive tissue;

a flap wherein said manipulating opening is normally closed by [[a]] said flap and is openable

to allow introduction of a user's fingers into the tissue-containing space, and

a lid covering ~~wherein~~ said tissue dispensing aperture and the manipulating opening ~~are~~
~~covered by a lid;~~

wherein said tissue dispensing aperture is defined by a first edge movable with said flap, and
a second edge which is fixed to a frame surrounding said flap; and

wherein the first edge comprises an outer edge formed on said flap, and the second edge
comprises an inner edge defined by a tab comprised on said frame and located between a pair of
spaced hinges on a film hinge arrangement.

41. (Original) A cover according to claim 40, wherein the manipulating opening of the dispenser is integrally molded with the cover.

42. (Original) A cover according to claim 40, wherein said flap is deformably openable.

43. (Currently amended) A tissue package comprising
a dispenser fitted with a tissue dispensing aperture and a manipulating opening, both opening
into a tissue-containing space of the package;

said tissue dispensing aperture is sized for dispensing one tissue at a time while separating a
duty tissue from a successive tissue;

a flap wherein said manipulating opening is normally closed by ~~[[a]]~~ said flap and is
deformable to allow introduction of a user's fingers into the tissue-containing space, and

a lid covering ~~wherein~~ said tissue dispensing aperture and the manipulating opening ~~are~~

covered by a lid.

wherein said tissue dispensing aperture is defined by a first edge movable with said flap, and a second edge which is fixed to a frame surrounding said flap; and

wherein the first edge comprises an outer edge formed on said flap, and the second edge comprises an inner edge defined by a tab comprised on said frame and located between a pair of spaced hinges on a film hinge arrangement.

44. (Original) A tissue package according to claim 43, wherein said flap is deformably openable.

45. (New) A dispenser for a tissue package, said dispenser comprising

a tissue dispensing aperture and a manipulating opening, both opening into a tissue-containing space of the package;

said tissue dispensing aperture is sized for dispensing one tissue at a time while separating a duty tissue from a successive tissue;

a flap wherein said manipulating opening is normally closed by said flap and is openable to allow introduction of a user's fingers into the tissue-containing space, and wherein said tissue dispensing aperture and the manipulating opening are coverable;

wherein said tissue dispensing aperture is defined by a first edge movable with said flap, and a second edge which is fixed to a frame; and

wherein the first edge comprises an outer edge formed on said flap, and the second edge comprises an inner edge defined by a tab comprised on said frame and located between spaced hinges.
